# Forestry and Landscape Management

*Master Study Programme, Joint Degree*

 Faculty  
of Forestry  
and Wood  
Technology

 Mendel  
University  
in Brno

## Profile

A new and dynamic study programme that brings together various disciplines, languages, cultures, and views. You will have an opportunity to see the best of the Central European and Scandinavian Forestry and to study the respective relations to the environment and the landscape. A wide range of optional courses will help you define your own points of view and find completely new themes. The Finnish-Czech Study Programme was established by Mendel University in Brno and the Lapland University of Applied Sciences. This inevitably gives many travelling opportunities as you will study a semester at the partner university. Since the study programme is international and also open for students outside the EU, all lessons will be held in English.

## What you get

Having graduated, you will be awarded a joint diploma from both partner universities. The study is undoubtedly worth the investment as it provides not only exceptional expertise but also the highly valued real life experiences at the level of international team work.

## Admission Requirements

In case you have already successfully completed your bachelor's degree in forestry, landscaping, agriculture or related disciplines, you will be required to pass a test from the English language. Students shall take part in financing their studies while the mobility between the partner countries is financially supported by a grant under the EU Erasmus+ Programme.

## Structure of Studies and List of Courses

The entire study programme is planned for two years while each academic year is divided into two semesters. Each semester takes 19 weeks, i.e. 14 weeks of studies and 5 weeks of the exam period.
