C Developer

Job Description

You will be working in our capture team, responsible for processing network traffic and developing parsers for new protocols including SCADA protocols; which are used in industrial network like power plants. You will also learn about security while contributing to our IDS (Intrusion Detection System) engine.

This is a Full-time position.

Required Skills

A strong interest in, and basic understanding of C, C++, Linux, as well as basic English.

Preferred Skills

- Practical experience with C programming and Bash scripting
- Familiarity with Git and Autotools
- Practical knowledge of Linux/UNIX
- Deep knowledge of network protocols
- Experience in Computer Engineering, Computer Science, or related field

Job Benefits

- Experience in artificial intelligence and cyber security
- Hands-on training and professional development
- Flexible working hours
- Long-term employment contract
- Career growth opportunities
