

DIPLOMA THESIS EVALUATION**Programme of study:** European Forestry**Field of study:** European Forestry**Academic year:** 2017/2018**Thesis title:** Natural regeneration in relation to different gap sizes**Thesis author:** Bc. Nina Maria Hiitola**Thesis supervisor:** doc. Ing. Radek Pokorný, Ph.D. (doc. Ing. Matjaž Čater, Ph.D.-consultant)**Thesis opposer:** Ing. Jiří Novák, Ph.D.

	Criteria	Grading						Cannot be evaluated
		A	B	C	D	E	F	
1	Meeting specification requirements	X						
2	Thesis topicality and professional level	X						
3	Utilisation of knowledge gained from study	X						
4	Utilisation of research literature	X						
5	Pertinence of the elaboration methodology	X						
6	Utilisation of result processing methods	X						
7	Interpretation of discussion conclusions	X						
8	Thesis formal layout		X					
9	Author's approach to the task handling	X						

Evaluation to be marked with X

Specific comments and questions to the thesis:

Presented thesis brings important results which can be used in forest management praxis. I have only small reservations about formal aspect of some figures. For example: Subtitles for figures should be located below in a standard way. Mentioned red colour missing in Fig. 5. Caption for x-axis should be described in Figs. 9-10, etc.

Questions for discussion:

Is it possible to quantify the impact of drought (2015) to development of observed natural regeneration?
In case of practical use of results – is it possible to generalize some part of results also for natural regeneration management in different site/stand conditions?

Conclusion: The final thesis is recommended / ~~is not recommended~~
